Mac Help  Migration Assistant
Your Mac mini has been designed so that you can easily set it up and start using it right away. If you have never used a Mac mini or are new to Macintosh computers, read this section for instructions about getting started.

**Important:** Read all of the installation instructions and the safety information starting on page 45 before you plug your Mac mini into a power outlet.

If you are an experienced user, you may already know enough to get started. Be sure to look over the information in Chapter 2, “Life with Your Mac mini,” to find out about the features of your Mac mini.
What’s in the Box

Your Mac mini comes with the following components:

- DVI to VGA Adapter
- AC cord
- Apple Remote
- Power adapter

Before you set up your Mac mini, remove the protective film from the outside of your computer and power adapter. Follow the steps on the next several pages to set up.
Setting Up Your Mac mini

Position your Mac mini so that it’s right side up or on its side, but not upside down. Use the power adapter that came with your Mac mini; other power adapters don’t work.

**Step 1:** Plug the AC cord into the power adapter, plug the cord from the power adapter into your Mac mini, and then plug the power adapter into a grounded power outlet.
Step 2: To access the Internet or a network, connect one end of an Ethernet cable to your Mac mini and the other end to a cable modem, DSL modem, or network.

Note: Your Mac mini comes with AirPort Extreme technology for wireless networking. For information about setting up a wireless connection, from the menu bar, choose Help > Mac Help, and then choose Library > AirPort Help. Also see “Getting Answers” on page 24. To use a dial-up connection, you need an external USB Modem, available for purchase from the online Apple Store at www.apple.com/store.
Step 3: Connect the USB cable from your keyboard and mouse.

Your Mac mini doesn’t come with a keyboard or a mouse, but you can use almost any USB keyboard and mouse. If your keyboard has a USB (µ) port, plug your mouse into the USB port on the keyboard. If it doesn’t, plug the mouse into a USB (µ) port on the back of your Mac mini.
If you use a USB keyboard that is not specifically designed for the Mac OS, it may not have a Command (⌘) or Option key, both of which are standard on Apple keyboards. The Command (⌘) key on an Apple keyboard is equivalent to the Windows key (the icon on the key looks like a Windows logo) on a keyboard from another manufacturer. The Option key on an Apple keyboard is equivalent to the Alt key on a keyboard from another manufacturer.

You can use Keyboard & Mouse preferences to change the keyboard equivalents. To open Keyboard & Mouse preferences, choose Apple () > System Preferences, click Keyboard & Mouse, click Modifier Keys, and follow the onscreen instructions.

Using a USB mouse or keyboard from another manufacturer may require software drivers. Check the manufacturer’s website for the latest software drivers.

Using a Wireless Keyboard or Mouse
If you purchased an Apple Wireless Keyboard or a wireless Mighty Mouse with your Mac mini, follow the instructions that came with the keyboard and mouse to set them up with your Mac mini.
Step 4: Connect the DVI cable from your display to the video port.
Connect a DVI display to the video out () port on the back of your Mac mini.
To connect a VGA display, use the Apple DVI to VGA Adapter that came with your computer.

Note: Your Mac mini does not come with a display.

Important: Don't place anything on top of your Mac mini. Objects placed on top may interfere with the optical drive or the AirPort or Bluetooth® wireless signal.
Step 5: Press the power (®) button on the back to turn on your Mac mini.

Step 6: Use Setup Assistant to configure your Mac mini.
The first time you turn on your Mac mini, Setup Assistant starts. Setup Assistant helps you enter your Internet and email information and set up a user account on your Mac mini. If you already have a Mac, Setup Assistant can help you automatically transfer files, applications, and other information from your previous Mac to your new Mac mini.
If you don’t intend to keep or use your other Mac, it’s best to deauthorize it from playing music, videos, or audiobooks that you’ve purchased from the iTunes Store. Deauthorizing a computer prevents any songs, videos, or audiobooks you’ve purchased from being played by someone else and frees up another authorization for use. For information about deauthorizing, choose iTunes Help from the Help menu in iTunes.

If you don’t use Setup Assistant to transfer information when you first start up, you can do it later using Migration Assistant. Go to the Applications folder, open Utilities, and double-click Migration Assistant.

**Step 7: Customize your desktop and set your preferences.**
You can quickly make your desktop look the way you want using System Preferences. Choose Apple () > System Preferences from the menu bar. As you get to know your computer, explore System Preferences, your command center for most settings on your Mac mini. For more information, open Mac Help and search for “System Preferences” or for the specific preference you want to change.
Putting Your Mac mini to Sleep or Shutting It Down

When you finish working with your Mac mini, you can put it to sleep or shut it down.

Put Your Mac mini to Sleep

If you will be away from your Mac mini for less than a few days, put it to sleep. When your Mac mini is in sleep, its screen is dark. You can quickly wake your Mac mini and bypass the startup process.

To put your Mac mini to sleep quickly, do one of the following:
- Choose Apple () > Sleep from the menu bar.
- Press the power (Â®) button on the back of the Mac mini.
- Choose Apple () > System Preferences, click Energy Saver, and set a sleep timer.
- Press and hold the Play/Pause (►) button on the Apple Remote for 3 seconds.

To wake your Mac mini, press any key on the keyboard or any button on the Apple Remote. When your Mac mini wakes from sleep, your applications, documents, and computer settings are exactly as you left them.

Shut Down Your Mac mini

If you won’t be using your Mac mini for more than a few days, shut it down. Choose Apple () > Shut Down.

WARNING: Shut down your Mac mini before moving it. Moving your Mac mini while the hard disk is spinning can damage the hard disk, causing loss of data or an inability to start up from the hard disk.

To turn your Mac mini on again, press the power (Â®) button.
Life with Your Mac mini

www.apple.com/macosx/overview
Mac Help iLife
Read on for an overview of the features and ports of your Mac mini.

The Apple website at www.apple.com links you to the latest Apple news, free downloads, and online catalogs of software and hardware for your Mac mini.

You can also find the manuals for many Apple products and technical support for all Apple products on the Apple Support website at www.apple.com/support.
What's on the Front of Your Mac mini

- Power indicator light
- Built-in infrared (IR) receiver
- AirPort antenna
- Slot-loading optical drive
- Power indicator light
Built-in infrared (IR) receiver
Works seamlessly with your Apple Remote for wireless control in Front Row.

Power indicator light
A steady white light indicates your Mac mini is on; a pulsing light indicates it’s in sleep.

Slot-loading optical drive
Your Mac mini has a DVD-ROM/CD-RW Combo drive or a DVD+R DL/DVD±RW/CD-RW SuperDrive. Each drive can read CD-ROM discs, standard audio discs, and other kinds of media. The Combo drive can also read DVD discs and movies and write music, documents, and digital files to CD-R and CD-RW discs. In addition to those files, the SuperDrive can read and write to DVD±R, DVD±RW, and DVD±R Double Layer (DL) discs.

AirPort Extreme wireless technology (inside)
Connect to a wireless network using built-in AirPort Extreme technology. To avoid interference, keep the area around the AirPort antenna free from obstruction.

Bluetooth wireless technology (inside)
Connect wireless devices, such as Bluetooth mobile phones, PDAs, printers, and the Apple Wireless Keyboard and wireless Mighty Mouse (you can purchase the Apple Wireless Keyboard and wireless Mighty Mouse at www.apple.com/store).
What’s on the Back of Your Mac mini

- Power button
- Power port
- FireWire 400 port
- Security slot
- Headphone out/optical digital audio out port
- Ethernet port (10/100/1000 Base-T)
- Video out port
- USB 2.0 ports (4)
- Audio in/optical digital audio in port
### Security slot
Attach a lock and cable to discourage theft (available at www.apple.com/store).

### Headphone out/optical digital audio out port
Connect headphones, external powered speakers, or digital audio equipment.

### Audio in/optical digital audio in port
Connect your Mac mini to a line-level microphone or digital audio equipment.

### Four USB 2.0 ports
Connect a mouse, keyboard, printer, iPod, external USB modem, and more.

### Video out port
Connect displays that use a DVI connector. Connect displays that use a VGA connector using the DVI to VGA Adapter that came with your computer. You can also use a DVI to Video Adapter, available at www.apple.com/store to connect a TV, VCR, or other video device.

### Ethernet port
Connect to a 10/100/1000Base-T Ethernet network or connect a DSL or cable modem.

### Power port
Connect the power cord from the power adapter.

### Power button
Turn on your Mac mini or put it to sleep. Press and hold to reset during troubleshooting.

### FireWire 400 port
Connect high-speed devices, such as an iSight video camera or a hard drive.
Getting Answers

Much more information about using your Mac is available in Mac Help and on the Internet at www.apple.com/support.

To open Mac Help:
1. Click the Finder icon in the Dock (the bar of icons along the edge of the screen).
2. Choose Help > Mac Help (click the Help menu in the menu bar and choose Mac Help).
3. Click in the search field, type a question, and press Return on your keyboard.

Problem, Meet Solution

www.apple.com/support

Mac Help help
Occasionally you may have problems while working with your Mac mini. Read on to find some solutions to try when you have a problem. You can also find more troubleshooting information in Mac Help or on the Mac mini Service & Support website at www.apple.com/support/macmini.

If you experience a problem working with your Mac mini, there is usually a simple and quick solution. If you encounter a problem, try to make a note of what you did before the problem occurred. This can help you narrow down the possible causes of the problem and then find the answers you need. Things to note include:

- The applications you were using when the problem occurred. Problems that occur only with a specific application may indicate that the application is not compatible with the Mac OS version installed on your computer.
- Any software that you recently installed.
- Any new hardware (such as additional memory or a peripheral) that you connected or installed.

**WARNING:** Do not attempt to open your Mac mini. If your Mac mini needs service, see “Learning More, Service, and Support” on page 41 for information about how to contact an Apple Authorized Service Provider or Apple for service. Your Mac mini doesn’t have any user-serviceable parts.
Problems That Prevent You from Using Your Mac mini

If your computer won't respond or the pointer won't move
- Make sure the mouse and keyboard are connected. Unplug and then plug in the connectors, making sure they are secure.
- If the problem persists, try to force problem applications to quit. On an Apple keyboard, hold down the Option and Command (⌘) keys and then press the Esc key. On other keyboards, hold down the Windows and Alt keys and then press the Esc key. If a dialog appears, select the frozen application and click Force Quit. Then save your work in any open applications and restart your Mac mini to be sure the problem is entirely cleared up.
- Press and hold the power (Ο) button on the back of your Mac mini for five seconds to shut down your computer.
- Unplug the power cord from your Mac mini. Then plug the power cord back in and press the power (Ο) button to turn it on.

If the problem reoccurs when you use a particular application, check with the application's manufacturer to see if the application is compatible with your computer.

For support and contact information about the software that came with your computer, go to www.apple.com/guide.

If the problem occurs frequently, try reinstalling your system software (see “Reinstalling the Software That Came with Your Computer” on page 32).
If your Mac mini freezes during startup or you see a flashing question mark
• Wait a few seconds. If your Mac mini doesn’t start up after a delay, shut down your Mac mini by pressing and holding the power (Ô) button for about 5 seconds, until it shuts down. Then hold down the Option key and press the power (Ô) button again to start up your computer. Keep holding down the Option key until your Mac mini starts up, then click the arrow under the icon of the hard disk you want to use as your startup disk.

• After your Mac mini starts up, open System Preferences and click Startup Disk. Select a local Mac OS X System folder.

• If the problem occurs frequently, you may need to reinstall your system software (see “Reinstalling the Software That Came with Your Computer” on page 32).

If your Mac mini won’t turn on or start up
• Make sure the power cord is plugged into your Mac mini and into a functioning power outlet.

• Press the power (Ô) button and immediately hold down the Command (⌘), Option, P, and R keys on an Apple keyboard until you hear the startup sound a second time. On other keyboards, press the power (Ô) button and immediately hold down the Windows, Alt, P, and R keys.

• Unplug the power cord and wait at least 30 seconds. Plug the power cord back in and press the power (Ô) button again to start up your Mac mini.

• See “Learning More, Service, and Support” on page 41 for information about contacting Apple for service.
Reinstalling the Software That Came with Your Computer

Use the software installation discs that came with your computer to reinstall Mac OS X and the applications that came with your computer.

*Important*: Apple recommends that you back up the data on your hard disk before restoring software. Apple is not responsible for any lost data.

**Installing Mac OS X**

To install Mac OS X:

1. Back up your important files, if possible.
2. Insert the Mac OS X Install Disc 1.
3. Double-click “Install Mac OS X and Bundled Software.”
4. Follow the onscreen instructions.
5. Select the destination disk for installation and continue following the onscreen instructions.

Your Mac mini may restart and ask you to insert the next Mac OS X install disc.

*Important*: Choosing the “Erase and Install” option erases the entire contents of your destination disk. You should back up your important files before installing Mac OS X.
Installing Applications
Your Mac mini must have Mac OS X already installed before you can install the applications that came with your computer.

To install the applications that came with your computer:
1. Back up your important files, if possible.
2. Insert the Mac OS X Install Disc 1.
3. Double-click Install Bundled Software Only.
4. Follow the onscreen instructions.
5. Select the destination disk for installation and continue following the onscreen instructions.

To install iCal, iChat AV, iSync, iTunes, and Safari, follow the Installing Mac OS X instructions.

Other Problems
If you have trouble opening an application
Determine the type of application you have, by selecting the application's icon and choosing Get Info from the File menu.

- You can use Universal, Intel, or PowerPC applications with your Mac mini.
• Classic (or Mac OS 9) applications are not compatible with your Mac mini and do not open.

If you have a problem with an application
For problems with software from a manufacturer other than Apple, contact the manufacturer. Software manufacturers often provide updates to their software on their websites.

You can set your Mac mini to check for and install the latest Apple software automatically using the Software Update pane of System Preferences. For more information, choose Help > Mac Help and search for "software update."

If you have trouble ejecting a disc
• Make sure nothing is placed on top of your computer. Objects placed on top of your computer may keep a disc from ejecting.
• Quit any applications that may be using the disc, and then press the Media Eject (⏏) key on your Apple keyboard. On other keyboards, you may be able to use the F12 key to eject a disc. Check the documentation that came with your keyboard.
• Open a Finder window and click the Eject (⏏) button next to the disc icon in the sidebar, or drag the disc icon from the desktop to the Trash.
• If that doesn't work, restart your computer while holding down the mouse button.

If you have a problem using your Mac mini or working with the Mac OS
• If the answers to your questions are not in this user’s guide, look in Mac Help for instructions and troubleshooting information. Choose Help > Mac Help.
• Check the Apple Support website at www.apple.com/support for the latest troubleshooting information and software updates.
If your date and time settings get lost repeatedly
• You may need to have the internal backup battery replaced. See "Learning More, Service, and Support" on page 41 for information about contacting Apple for service.

Using Apple Hardware Test
Use Apple Hardware Test to determine if there is a problem with your Mac mini.

To use Apple Hardware Test:
1 Disconnect all external devices from your Mac mini, except the keyboard and mouse. If you have an Ethernet cable connected, disconnect it.
2 Insert the Mac OS X Install Disc 1 that came with your Mac mini.
3 Restart your Mac mini and hold down the D key as it starts up.
4 When the Apple Hardware Test language chooser screen appears, select the language appropriate for your location.
5 Press the Return key or click the right arrow button.
6 When the Apple Hardware Test main screen appears (after about 45 seconds), follow the onscreen instructions.
7 If Apple Hardware Test detects a problem, it displays an error code. Make a note of the error code before pursuing support options. If Apple Hardware Test doesn't detect a hardware failure, the problem may be software-related.

For more information about Apple Hardware Test, see the Apple Hardware Test Read Me file on the Mac OS X Install Disc 1.
Problems with Your Internet Connection

Your Mac mini has the Setup Assistant application to help walk you through setting up an Internet connection. Open System Preferences and click Network. Click the “Assist me” button to open Network Setup Assistant.

If you have trouble with your Internet connection, you can try the steps in this section for your type of connection or you can use Network Diagnostics.

To use Network Diagnostics:
1. Choose Apple () > System Preferences.
2. Click Network and then click “Assist me.”
3. Click Diagnostics to open Network Diagnostics.
4. Follow the onscreen instructions.

If Network Diagnostics can’t resolve the problem, there may be a problem with the Internet service provider (ISP) you are trying to connect to, with an external device you are using to connect to your ISP, or with the server you are trying to access. You can try the steps in the following sections.

Cable Modem, DSL Modem, and LAN Internet Connections
Make sure all modem cables are firmly plugged in, including the modem power cord, the cable from the modem to the computer, and the cable from the modem to the wall jack. Also check the cables and power supplies to any Ethernet hubs or routers.

Turn the modem off and on and reset the modem hardware
Turn off your DSL or cable modem for a few minutes, and then turn it back on. Some ISPs recommend that you unplug the modem’s power cord. If your modem has a reset button, you can press it either before or after you turn the power off and on.
Important: Instructions that refer to modems do not apply to LAN users. LAN users might have hubs, switches, routers, or connection pods that cable and DSL modem users do not have. LAN users should contact their network administrator rather than an ISP.

PPPoE Connections
If you are unable to connect to your ISP using PPPoE, make sure you have entered the correct information in Network preferences.

To check your Network preference settings:
1 Choose Apple () > System Preferences from the menu bar.
2 Click Network.
3 Choose Network Port Configurations from the Show pop-up menu.
4 Drag Built-in Ethernet to the top of the Port Configurations list.
5 Choose Built-in Ethernet from the Show pop-up menu.
6 Click PPPoE.
7 Select “Connect using PPPoE.”
8 Check the Account Name field to be sure you have entered the correct information from your ISP.
9 If you chose to save your password, retype it to make sure it is correct.
10 Click TCP/IP. Make sure you’ve entered the correct information from your ISP in this pane.
11 Click Apply Now.
Network Connections
Make sure the Ethernet cable is plugged into your Mac mini and into the network.
Check the cables and power supplies to your Ethernet hubs and routers.

If you have two or more computers attempting to share an Internet connection, be
sure that your network is set up properly. You need to know whether your ISP provides
only one IP address or multiple IP addresses, one for each computer.

If only one IP address is provided, then you must have a router capable of sharing the
connection, also known as network address translation (NAT) or "IP masquerading."
For setup information, check the documentation provided with your router or ask
the person who set up your network. The AirPort Base Station can be used to share
one IP address among multiple computers. For information about using an AirPort
Base Station, check Mac Help or visit the AirPort Extreme website at

If you can’t resolve the issue using these steps, contact your ISP or network
administrator.
Problems with AirPort Extreme Wireless Communication

If you have trouble using AirPort Extreme wireless communication

- Make sure the computer or network you are trying to connect to is running and has a wireless access point.
- Make sure you have properly configured the software according to the instructions that came with your base station or access point.
- Make sure you are within antenna range of the other computer or the network’s access point. Nearby electronic devices or metal structures can interfere with wireless communication and reduce this range. Repositioning or rotating the computer might improve reception.
- Check the AirPort (_WIFI) status menu in the menu bar. Up to four bars appear, indicating signal strength. If you don’t see the bars, try moving your location.
- See AirPort Help (choose Help > Mac Help, and then choose Library > AirPort Help from the menu bar). Also see the instructions that came with the wireless device for more information.
Keeping Your Software Up to Date

You can connect to the Internet and automatically download and install the latest free software versions, drivers, and other enhancements from Apple.

When you are connected to the Internet, Software Update checks Apple’s Internet servers to see if any updates are available for your computer. You can set your Mac mini to check the Apple server periodically and download and install updated software.

To check for updated software:

1. Choose Apple () > System Preferences.
2. Click the Software Update icon and follow the instructions on the screen.

For more information, search for “Software Update” in Mac Help.

For the latest information about Mac OS X, go to www.apple.com/macosx/overview.
Learning More, Service, and Support

Your Mac mini does not have any user-serviceable parts. If you need service, take your Mac mini to an Apple Authorized Service Provider or contact Apple for service. You can find more information about your Mac mini through online resources, onscreen help, System Profiler, or Apple Hardware Test.

If you didn’t order AirPort Extreme or Bluetooth technology with your Mac mini or if you want additional memory installed, contact an Apple Authorized Service Provider or an Apple Store retail location.

Online Resources
For online service and support information, go to www.apple.com/support. Choose your country from the pop-up menu. You can search the AppleCare Knowledge Base, check for software updates, or get help on Apple’s discussion forums.

Onscreen Help
You can often find answers to your questions, as well as instructions and troubleshooting information, in Mac Help. Choose Help > Mac Help.

System Profiler
To get information about your Mac mini, use System Profiler. System Profiler shows you which hardware and software is installed, the serial number and operating system version, how much memory is installed, and more. To open System Profiler, choose Apple () > About This Mac from the menu bar and then click More Info.
AppleCare Service and Support

Your Mac mini comes with 90 days of technical support and one year of hardware repair warranty coverage at an Apple Store retail location or an Apple-authorized repair center, such as Apple Authorized Service Provider (AASP). You can extend your coverage by purchasing the AppleCare Protection Plan. For information, visit www.apple.com/support/products or visit the website address for your country listed in the table.

If you need assistance, AppleCare telephone support representatives can help you with installing and opening applications, and basic troubleshooting. Call the support center number nearest you (the first 90 days are complimentary). Have the purchase date and your Mac mini serial number ready when you call.

Note: Your 90 days of complimentary telephone support begins on the date of purchase and telephone fees may apply.

Telephone numbers are subject to change, and local and national telephone rates may apply. A complete list is available on the web:

www.apple.com/contact/phone_contacts.html

Locating Your Product Serial Number
Use any of these methods to find your Mac mini serial number:

• Choose Apple () from the menu bar and then choose About This Mac. Click the version number beneath the words "Mac OS X" to cycle through the Mac OS X version number, the build version, and the serial number.

• Click the Finder icon and open /Applications/Utilities/System Profiler. Click Hardware in the Contents pane.

• Look on the bottom of your Mac mini.
Last, but Not Least
For the safety of you and your equipment, follow these rules for cleaning and handling your Mac mini, and for working more comfortably. Apple products are designed and evaluated to the latest information technology and audio and video equipment safety standards. However, you need to follow the safety instructions on the product and in the documentation.

**Safety Instructions for Setting Up and Using Your Mac mini**

The only way to disconnect power completely from your computer is to unplug the power cord from the main power supply. Make sure that at least one end of the power cord is within easy reach so that you can unplug the computer when necessary.

Disconnect the power plug from your Mac mini by pulling the plug, not the cord, if any of the following conditions exists:

- The power cord or plug becomes frayed or otherwise damaged
- You spill something into the case
- Your computer is exposed to rain or other excess moisture
- Your computer has been dropped or the case has been damaged
- You suspect that your computer needs service or repair
- You want to clean your computer

For service or questions about your warranty, contact an Apple Authorized Service Provider or Apple. See the service and support information in "Learning More, Service, and Support" on page 41.
**Important:** The only way to turn off power completely is to disconnect the power cord and all USB and FireWire devices, and remove the Ethernet cable. Make sure at least one end of the power cord is within easy reach so that you can unplug your computer when you need to.

**WARNING:** Your AC cord came equipped with a three-wire grounding plug (a plug that has a third grounding pin). This plug will fit only a grounded AC outlet. If you are unable to insert the plug into an outlet because the outlet is not grounded, contact a licensed electrician to replace the outlet with a properly grounded outlet. Do not defeat the purpose of the grounding plug.

Be sure that you always do the following:

- Keep your computer away from sources of liquid, such as drinks, washbasins, bathtubs, shower stalls, and so on.
- Protect your computer from dampness or wet weather, such as rain, snow, and so on.
- Read all the installation instructions carefully before you plug your computer into a power outlet.
- Keep these instructions handy for reference by you and others.
- Follow all instructions and warnings about your computer.
**Important:** Electrical equipment may be hazardous if misused. Operation of this product, or similar products, must always be supervised by an adult. Do not allow children access to the interior of any electrical product and do not permit them to handle any cables.

**WARNING:** Never push objects of any kind into this product through the ventilation openings in the case. Doing so may be dangerous and damage your computer.

**Do Not Make Repairs Yourself**
Your Mac mini doesn't have any user-serviceable parts. Do not attempt to open your Mac mini. If your Mac mini needs service, consult the service and support information that came with your computer for instructions about how to contact an Apple Authorized Service Provider or Apple for service.

If you open your Mac mini or install items, you risk damaging your equipment, and such damage isn't covered by the limited warranty on your Mac mini.

**Using Connectors and Ports**
Never force a connector into a port. If the connector and port don't join with reasonable ease, they probably don't match. Make sure that the connector matches the port and that you have positioned the connector correctly in relation to the port.
Using the Power Adapter

Follow these guidelines for using the power adapter:

• Make sure you push the power plugs snugly into the power adapter, your computer, and the power outlet.

• Always leave space around the power adapter and use your computer in a location where airflow around the power adapter is not obstructed.

• Use the power adapter that came with your computer. Your Mac mini uses a 110 watt power adapter.

• The only way to disconnect power completely is to unplug the power cord. Make sure you pull the plug, not the cord.

**WARNING:** It is normal for the power adapter to get warm during use. Always allow adequate ventilation and avoid prolonged contact.
Important: The power adapter for your computer is a high-voltage component and should not be opened for any reason, even when it’s unplugged. Do not allow children access to the interior of any electrical product and do not permit them to handle any power cables. If the power adapter needs service, see the service and support information in “Learning More, Service, and Support” on page 41.

WARNING: Use only the power adapter that came with your computer and the AC cord that came with your power adapter. Adapters and cords for other electronic devices may look similar, but using them may affect your computer’s performance or damage your computer. The AC power cord has a three-wire grounding plug (a plug that has a third grounding pin) that will fit only a grounded AC outlet. If you are unable to insert the plug into an outlet because the outlet is not grounded, contact a licensed electrician to replace the outlet with a properly grounded outlet.

Laser Information
Do not attempt to disassemble the cabinet containing the laser. The laser beam used in this product is harmful to the eyes. The use of optical instruments, such as magnifying lenses, with this product increases the potential hazard to your eyes. For your safety, have this equipment serviced only by an Apple Authorized Service Provider.

Because of the optical disc drive in your computer, your computer is a Class 1 laser product.
High-Risk Activities Warning
This computer system is not intended for use in the operation of nuclear facilities, aircraft navigation or communications systems, or air traffic control machines, or for any other uses where the failure of your computer system could lead to death, personal injury, or severe environmental damage.

Cleaning Your Mac mini
Follow these guidelines when cleaning the outside of your Mac mini and its components:

• Shut down your Mac mini and disconnect all cables.
• Use a damp, soft, lint-free cloth to clean your Mac mini’s exterior. Avoid getting moisture in any openings. Do not spray liquid directly on your Mac mini.
• Don’t use aerosol sprays, solvents, or abrasives.
Avoid Hearing Damage

**WARNING:** Permanent hearing loss may occur if earbuds or headphones are used at high volume. You can adapt over time to a higher volume of sound that may sound normal but can be damaging to your hearing. If you experience ringing in your ears or muffled speech, then stop listening and have your hearing checked. The louder the volume, the less time required before your hearing can be affected. Hearing experts suggest that to protect your hearing:

- Limit the amount of time you use earbuds or headphones at high volume
- Avoid turning up the volume to block out noisy surroundings
- Turn the volume down if you can't hear people speaking to you

Important Ergonomic and Health-Related Information

Here are some guidelines for adjusting the furniture in your office to reduce glare and to accommodate your physical size and shape.

- Use an adjustable chair that provides firm, comfortable support. Adjust the height of the chair so your thighs are tilted slightly and your feet are flat on the floor.
  The back of the chair should support your lower back (lumbar region). Follow the manufacturer’s instructions for adjusting the backrest to fit your body properly.
- When you use the computer keyboard, your shoulders should be relaxed. Your upper arm and forearm should form an approximate right angle, with your wrist and hand in roughly a straight line.
You may have to raise the chair so that your forearms and hands are at the proper angle to the keyboard. If this makes it impossible to rest your feet flat on the floor, you can use a footrest with adjustable height and tilt to make up for any gap between the floor and your feet. Or you can lower the desktop to eliminate the need for a footrest. Another option is to use a desk with a keyboard tray that’s lower than the regular work surface.

- Position the mouse at the same height as your keyboard. Allow adequate space to use the mouse comfortably.
- Arrange the display so that the top of the screen is slightly below eye level when you’re sitting at the keyboard. The best distance from your eyes to the screen is up to you, although most people seem to prefer 18 to 28 inches (45 to 70 cm).
Position the display to minimize glare and reflections on the screen from overhead lights and nearby windows. If possible, use a tiltable display stand. The stand lets you set the display at the best angle for viewing, helping to reduce or eliminate glare from lighting sources you can’t move.

More information about ergonomics is available on the web:

www.apple.com/about/ergonomics
Carrying Your Mac mini
Before you lift or reposition your Mac mini, shut it down and disconnect all cables and cords connected to it.

Apple and the Environment
Apple Inc. recognizes its responsibility to minimize the environmental impact of its operations and products.

More information is available on the web:

www.apple.com/environment
Regulatory Compliance Information

Compliance Statement
This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. See instructions if interference to radio or television reception is suspected.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes : (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

Radio and Television Interference
This computer equipment generates, uses, and can radiate radio-frequency energy. If it is not installed and used properly—that is, in strict accordance with Apple's instructions—it may cause interference with radio and television reception.

This equipment has been tested and found to comply with the limits for a Class B digital device in accordance with the specifications in Part 15 of FCC rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

You can determine whether your computer system is causing interference by turning it off. If the interference stops, it was probably caused by the computer or one of the peripheral devices.

If your computer system does cause interference to radio or television reception, try to correct the interference by using one or more of the following measures:
- Turn the television or radio antenna until the interference stops.
- Move the computer to one side or the other of the television or radio.
- Move the computer farther away from the television or radio.
- Plug the computer into an outlet that is on a different circuit from the television or radio. (That is, make certain the computer and the television or radio are on circuits controlled by different circuit breakers or fuses.)

If necessary, consult an Apple Authorized Service Provider or Apple. See the service and support information that came with your Apple product. Or, consult an experienced radio/television technician for additional suggestions.

Important: Changes or modifications to this product not authorized by Apple Inc. could void the EMC compliance and negate your authority to operate the product.

This product has demonstrated EMC compliance under conditions that included the use of compliant peripheral devices and shielded cables between system components. It is important that you use compliant peripheral devices and shielded cables (including Ethernet network cables) between system components to reduce the possibility of causing interference to radios, television sets, and other electronic devices.

Wireless Radio Use
This device is restricted to indoor use when operating in the 5.15 to 5.25 GHz frequency band.

Exposure to Radio Frequency Energy
The radiation output power of the AirPort Card in this device is below the FCC radio frequency exposure limits for uncontrolled equipment. This device should be operated with a minimum distance of at least 20 cm between the AirPort Card antennas and a person’s body and must not be co-located or operated with any other antenna or transmitter.

FCC Bluetooth Wireless Compliance
The antenna used with this transmitter must not be colocated or operated in conjunction with any other antenna or transmitter subject to the conditions of the FCC Grant.

Bluetooth Industry Canada Statement
This Class B device meets all requirements of the Canadian interference-causing equipment regulations.

Industry Canada Statement
Complies with the Canadian ICES-003 Class B specifications. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada. This device complies with RSS 210 of Industry Canada.

Bluetooth Europe — EU Declaration of Conformity
This wireless device complies with the specifications
EN 300 328, EN 301 489-17, EN 60950 following the provisions of the R&TTE Directive.

Europe — EU Declaration of Conformity
The equipment complies with the RF Exposure Requirement 1999/519/EC, Council Recommendation of 12 July 1999 on the limitation of exposure of the general public to electromagnetic fields (0 Hz to 300 GHz). This equipment meets the following conformance standards:
EN 301 328, EN 301 893, EN 301 489-17, EN 60950.

Hereby, Apple Inc., declares that this 802.11 Mini PCIe card is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

Complies with European Directives

Foreign USB Modem Information
ENERGY STAR® Compliance

As an ENERGY STAR® partner, Apple has determined that standard configurations of this product meet the ENERGY STAR® guidelines for energy efficiency. The ENERGY STAR® program is a partnership with electronic equipment manufacturers to promote energy-efficient products. Reducing energy consumption of products saves money and helps conserve valuable resources.

This computer is shipped with power management enabled with the computer set to sleep after 10 minutes of user inactivity. To wake your computer, click the mouse or trackpad button or press any key on the keyboard.

For more information about ENERGY STAR®, visit: www.energystar.gov

Disposal and Recycling Information

This symbol indicates that your product must be disposed of properly according to local laws and regulations. When your product reaches its end of life, contact Apple or your local authorities to learn about recycling options.

For more information about Apple’s recycling programs, visit: www.apple.com/environment/recycling

Battery Disposal Information

Dispose of batteries according to your local environmental laws and guidelines.

California: The coin cell battery in your product contains perchlorates. Special handling and disposal may apply. Refer to www.dtsc.ca.gov/hazardouswaste/perchlorate.

Nederlands: Gebruikte batterijen kunnen worden ingeleverd bij de chemokar of in een speciale batterijcontainer voor klein chemisch afval (kca) worden gedeponeerd.
Taiwan:

European Union—Disposal Information

The symbol above means that according to local laws and regulations your product should be disposed of separately from household waste. When this product reaches its end of life, take it to a collection point designated by local authorities. Some collection points accept products for free. The separate collection and recycling of your product at the time of disposal will help conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment.
